

README

Documentation Index

This directory contains comprehensive documentation for the Oro Ticket App project.

📖 Documentation Overview

The Oro Ticket App documentation is organized into several key documents, each serving a specific audience and purpose.

📖 Document List

1. \$1 - Main Project Documentation

\$1: All users (developers, stakeholders, end users)

\$1: Project overview, setup instructions, features, and getting started guide

\$1

Project overview and features

Installation and setup instructions

Architecture overview

Business flows summary

Technology stack

Development workflow

Deployment guide

2. \$1 - Business Process Documentation

\$1: Business analysts, product managers, stakeholders

\$1: Detailed business process flows and logic

\$1

User authentication flow

Ticket booking and issuance flow

Trip management flow

Data synchronization flow

Reporting and analytics flow

Fleet management flow

Service charge management flow

Commission management flow

Business rules and constraints

3. \$1 - API Integration Guide

\$1: Backend developers, API consumers, integration teams

\$1: Complete API reference and integration guide

\$1

API overview and configuration

Authentication endpoints

Core endpoints (vehicles, trips, service charges)

Data synchronization APIs

Error handling

Rate limiting

Versioning strategy

Testing and development tools

4. \$1 - End User Manual

\$1: Transport company staff, conductors, administrators

\$1: Step-by-step user instructions

\$1

Getting started guide

First-time setup

Daily operations workflow

Ticket management procedures

Trip recording instructions

Reporting features

Data synchronization

Troubleshooting guide

Best practices

5. \$1 - Developer Handbook

\$1: Flutter developers, technical team members

\$1: Technical implementation guide and development standards

\$1

Development environment setup

Project structure and organization

Code standards and conventions

Development workflow

Testing strategies

Deployment procedures

Best practices

Troubleshooting common issues

6. \$1 - Module Technical Documentation

\$1: Developers, architects, maintenance team

\$1: Detailed technical documentation of each module

\$1

Authentication module details

Home/Dashboard module

Ticket management module

Trip management module

Fleet management module

Reporting module

Synchronization module

Business logic explanations

Code implementation details

☒ Documentation Map

☒ Reading Guide

For New Team Members

1. Start with \$1 for project overview
2. Read \$1 for setup and workflow
3. Review \$1 for technical architecture
4. Refer to \$1 for business context

For Business Stakeholders

- 1. \$1 for project overview
- 2. \$1 for process understanding
- 3. \$1 for operational procedures

For API Integrators

- 1. \$1 for complete API reference
- 2. \$1 for data flow understanding

For End Users

- 1. \$1 as primary reference
- 2. \$1 for feature overview

☒ Maintenance

Update Frequency

- \$1: Updated with each release
- \$1: Updated with API changes
- \$1: Updated quarterly or with major feature changes
- \$1: Updated with development process changes
- \$1: Updated with business process changes
- \$1: Updated with code changes

Review Process

- 1. Technical changes require developer review
- 2. Business changes require product owner review
- 3. User-facing changes require user acceptance testing
- 4. All documentation reviewed during release process

☒ Support

Documentation Issues

- \$1: Contact development team
- \$1: Contact product team
- \$1: Contact UX team

Feedback

- Use GitHub issues for documentation improvements
- Tag with \$1 label
- Include specific section and suggested changes

☒ Version Information

- \$1: 1.0.0
- \$1: 1.0.0
- \$1: November 2024
- \$1: Oromia Transport Agency Documentation Team
