API Overview

Base Configuration

- \$1: \$1
- \$1: HTTP/HTTPS
- \$1: JSON
- \$1: JWT Bearer Token
- \$1: 1000 requests per hour per user

Request/Response Format

Request Headers

Response Format

Authentication

Login Endpoint

\$1 \$1

Authenticates a company user and returns JWT token.

Request Body

Response

Profile Endpoint

\$1 \$1

Retrieves authenticated user's profile and associated data.

Response

Core Endpoints

Vehicle Management

Get Company Vehicles

\$1 \$1

Retrieves all vehicles assigned to the user's company.

Query Parameters

\$1 (optional): Page number for pagination

\$1 (optional): Items per page (default: 50)

Response

Trip Management

Create Trip

\$1 \$1

Records a completed trip with all associated data.

Request Body

Response

Get Company Trips

\$1 \$1

Retrieves trips for the user's company with filtering options.

Query Parameters

\$1 (optional): Filter by start date

\$1 (optional): Filter by end date

\$1 (optional): Filter by specific vehicle

\$1 (optional): Page number

Service Charge Management

Create Service Charge

\$1 \$1

Records service charges collected during ticket sales.

Request Body

Commission Rules

Get Commission Rules

\$1 \$1

Retrieves commission rules applicable to the company.

Response

Data Synchronization

Synchronization Strategy

The app implements an offline-first architecture with the following sync patterns:

1. \$1: Immediate sync when online
2. \$1: Manual bulk synchronization
3. \$1: Automated periodic sync

Sync Endpoints

Bulk Trip Sync

\$1 \$1

Synchronizes multiple trips in a single request.

Request Body

Bulk Service Charge Sync

\$1 \$1

Synchronizes multiple service charges.

Request Body

Error Handling

HTTP Status Codes

\$1: Success

\$1: Created

\$1: Bad Request

\$1: Unauthorized

\$1: Forbidden

\$1: Not Found

\$1: Validation Error

\$1: Too Many Requests

\$1: Internal Server Error

Error Response Format

Common Error Scenarios

Authentication Errors

Validation Errors

Network Errors

Rate Limiting

Rate Limit Headers

The API includes rate limiting information in response headers:

Rate Limit Exceeded Response

API Versioning

Version Strategy

\$1: \$1

\$1: \$1

\$1: v1 (default)

Version Compatibility

\$1: Maintained for 2 major versions

\$1: 3 months advance notice

\$1: Provided for breaking changes

Version Headers

Data Types and Validation

Common Data Types

DateTime Format

\$1: ISO 8601 (\$1)

\$1: UTC

\$1: \$1

Currency Format

\$1: Ethiopian Birr (ETB)

\$1: Decimal with 2 places

\$1: \$1

ID Format

\$1: \$1

\$1: \$1

Validation Rules

Vehicle Validation

Plate number: Required, unique per company

Seat capacity: Integer, 1-100

Status: Enum [active, inactive, maintenance]

Trip Validation

Vehicle ID: Must exist and be active

Terminals: Must be valid route combination

Amounts: Must be positive numbers

Date/Time: Must be current or future

Service Charge Validation

Amount: Must be positive

Employee ID: Must be valid company user

Terminal ID: Must be assigned to user

Security Considerations

Authentication Security

\$1: 24 hours

\$1: Not implemented (use re-login)

\$1: Tokens stored in encrypted storage

Data Security

\$1: HTTPS required

\$1: Server-side validation

\$1: Parameterized queries

\$1: Input sanitization

API Security

- \$1: Configured for mobile app origins
- \$1: Not applicable (JWT authentication)
- \$1: Per-user and per-IP limits
- \$1: All API calls logged for audit

Testing and Development

Sandbox Environment

- \$1: \$1
- \$1: Isolated test data
- \$1: Relaxed for development

API Testing Tools

Postman Collection

cURL Examples

Monitoring and Analytics

API Metrics

- \$1: Average and percentile metrics
- \$1: Per endpoint error tracking
- \$1: Request volume and patterns
- \$1: Database query performance

Logging

- \$1: All API requests logged
- \$1: Detailed error information
- \$1: Sensitive operation tracking
- \$1: Slow query identification

- \$1: v1.0.0
- \$1: November 2024
- \$1: api@orotransport.et
